

Requirements

A valid version of Python is required. The neural network tool was created in Python 3.11, due to Tensorflow only supporting Python 3.9 - 3.12. If you are experiencing problems with a different version, please switch to 3.11.

The tools use a variety of external packages that need to be installed through pip beforehand. The packages are:

- numpy
- scikit-learn
- pandas
- tensorflow

Run `pip install {package_name}` for these packages in the python.
